Introduction

This story analyzes restaurant performance across revenue, ratings, and cuisine data to uncover what drives popularity, profitability, and customer engagement across cities.

Hypotheses

- Higher-rated restaurants generate more revenue.
- Cities with more restaurants produce higher total sales.
- Certain cuisines dominate both in popularity and profitability.

Dataset: Analysis utilized the *Restaurant* and *Orders* tables. Key fields include Restaurant Name, Cuisine, City, Rating, Rating Count, Cost, Order Date, Sales Quantity, and Sales Amount.

Total Revenue: Sum of all sales amounts per restaurant.

Total Orders: Count of all completed orders.

Average Cost: Typical meal price per restaurant.

Average Rating: Mean of customer ratings.

Rating Count: Total number of customer reviews.

Cuisine & City: Used to compare popularity and performance across categories and regions.

Key Business Questions

- Which restaurants generate the most revenue?
- Which cuisines dominate top-performing restaurants?
- Are higher-rated restaurants associated with higher revenue?
- How do meal costs and locations impact performance?

Key Business Recommendations

- Promote and expand high-performing restaurants in similar regions.
- Invest in restaurants with strong ratings but low visibility.
- Identify top-performing cuisines for partnerships and promotions.
- Use cost-to-revenue ratios to guide pricing strategies.

This section examines how geography influences restaurant performance. Delhi, Bangalore, and Ahmedabad generate the highest revenue, showing strong urban demand, while smaller cities reveal opportunities for regional expansion.

Total Revenue per City

Total Revenue by top 10 City

This analysis compares how customer ratings and cuisine types impact revenue. Ratings show only a mild correlation with sales, suggesting that popularity is driven more by accessibility and brand reach than by quality alone.

Correlation of Rating, Cost, & Revenue/restaurant

Rating vs Revenue per Restaurant

Conclusions & Recommendations

This analysis explored restaurant performance using the Restaurant and Orders datasets to answer:
“Which restaurants are popular, which generate the highest revenue, and why?”
The findings highlight dominant brands, cuisine patterns, city-level trends, and how cost and ratings influence revenue.
All visuals and conclusions are based on Tableau dashboards built from cleaned and joined data on restaurant IDs and order records.

1. Restaurant Performance Overview

Insight:
A small group of restaurants—led by *Domino's Pizza*, *Kouzina Kafe*, and *Sweet Truth*—generate the majority of total revenue and orders. These leaders maintain strong customer satisfaction, averaging ratings near 4.0.
Recommendation:
Leverage the business models of these high performers to guide future expansion and operational improvements.
(Source: “Overview” — Total Revenue per Restaurant & Total Orders per Restaurant)

2. Popularity Trends

Insight:
North Indian & Chinese, *Indian*, and *North Indian* cuisines dominate total revenue.
Top brands—*Domino's Pizza*, *KFC*, *Pizza Hut*, *Sweet Truth*—reveal customer preference for familiar, standardized, fast-service cuisine.
Recommendation:
Expand marketing and delivery focus on these cuisines, particularly in cities with rising order volumes.
(Source: “Popularity Trends” — Revenue by Cuisine and Top 10 Restaurants Distribution)

3. Profitability Insights

Insight:
Restaurants such as *Janta Snacks*, *Happy Brew Cafe*, and *Cafe Yummy* achieve the highest **average sales per order**, indicating profitable per-transaction performance even without high order counts.
Recommendation:
Support these mid-volume, high-margin businesses with strategic pricing, loyalty programs, and visibility boosts.
Next Steps:
(Source: “Profitability Insights” — Average Sales per Order and Average Cost Charts)

4. Location & Demographics

Insight:
Delhi, *Bangalore*, and *Ahmedabad* are the top-grossing cities. Smaller markets show limited presence but potential for future expansion.
Recommendation:
Prioritize high-revenue metros for retention efforts and explore expansion in under-represented cities with emerging demand.
(Source: “Location & Demographics” — Total Revenue per City and Top 10 Cities Pie Chart)

5. Ratings & Cuisine Influence

Insight:
Higher ratings do not always correlate with higher revenue—many top earners have mid-range (3.8–4.0) ratings.
Premium-cost restaurants are fewer but achieve strong per-order revenue. *Dessert* and *Pizza* cuisines dominate the top 10 list, showing that moderate pricing and broad appeal drive consistent performance.
Recommendation:
Balance pricing and quality to maintain both order volume and customer satisfaction. Promote mid-range restaurants that demonstrate profitability at scale.
